Bridging the Digital Divide with 5G Solutions Designed for School Buses

In an era where access to the Internet is a necessity, students without Wi-Fi at home and students with long commutes to and from school are particularly disadvantaged in completing their homework. This can lead to lower scores on standardized tests and lower graduation rates, contributing to the digital divide. PMC Wireless is a **35+ year family-owned mission critical company**, ready-to-install passenger Wi-Fi solutions suited perfectly via bundled router, antenna, and professional install for public school buses.
