<b>See Notes Below or Contact JPS for Assistance</b>		
<i>Note: Each channel requires its own chassis plus enough Site Voter Modules to service all local and remote sites (or multiple chassis for sites with high number of sites, up to 60 total sites per channel). Remote sites can be RX &amp; TX or RX only. Following notes are all on a per channel basis.</i>		
<i>For traditional interconnect (T1 uwave, telcoT1, tie line, RT lines, 4 wire audio, RF link, direct connected, etc.) order 1 SVM-2 per remote site.</i>		
<i>For IP backhaul (IP uwave or IP fiber, NOT the Internet) order 1 QMT-1B per remote site, and 1 SVM-3B per 3 remote sites</i>		
<i>Notes below apply to new IP Backhaul capability using the new SVM-3B Site Voter Modules and the QMT-1B remote unit (QMT-1B installed at remote site). IP network must meet certain minimums related to latency, packet loss, jitter, etc. Consult JPS documentation for details.</i>		
<i>A chassis can contain both SVM-2 and SVM-3 modules to service both traditional and IP backhaul sites on the same channel. Older SNV-12 units with CPM-1s or SVM-1s are not compatible with SVM-3s, these older modules must be swapped out for current CPM-5s &amp; SVM-2s, respectively. Consult JPS for full information.</i>
